	Background: Vital cellular functions such as cell proliferation and signal transduction are		
	regulated in part by the balance between the activities of protein tyrosine kinases (PTK) and		
	protein tyrosine phosphatases (PTPs). The protein contains a 121 residue extracellular domain,		
	a single transmembrane segment, and 2 tandem intracytoplasmic catalytic domains. The PTP		
	alpha protein is ubiquitously expressed and may play a fundamental role in the physiology of all		
	cells.
