Characteristics:

Key Benefits:

- Made to order protein - from design to production - by highly experienced protein experts.
- Protein expressed in mammalian cells and purified in one-step affinity chromatography
- The optimized expression system ensures reliability for intracellular, secreted and transmembrane proteins.
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

If you are not interested in a full length protein, please contact us for individual protein fragments.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Target Details

Target:

SLC38A1

Alternative Name:

Slc38a1 ([SLC38A1 Products](#))

Background:

Sodium-coupled neutral amino acid symporter 1 (Amino acid transporter A1) (Mnat2) (N-system amino acid transporter 2) (Solute carrier family 38 member 1) (System A amino acid transporter 1) (System N amino acid transporter 1),FUNCTION: Symporter that cotransports short-chain neutral amino acids and sodium ions from the extracellular to the intracellular side of the cell membrane (PubMed:11325958, PubMed:17179157, PubMed:32668809, PubMed:27655909). The transport is electrogenic, pH dependent and driven by the Na(+) electrochemical gradient (PubMed:11325958). Participates in the astroglia-derived glutamine transport into GABAergic interneurons for neurotransmitter GABA de novo synthesis (PubMed:31050701, PubMed:32668809). May also contribute to amino acid transport in placental trophoblast (By similarity). Regulates synaptic plasticity (PubMed:31050701). {ECO:0000250|UniProtKB:Q9H2H9, ECO:0000269|PubMed:11325958, ECO:0000269|PubMed:17179157, ECO:0000269|PubMed:27655909, ECO:0000269|PubMed:31050701, ECO:0000269|PubMed:32668809}.
