	experiences with the expression system, a different complexity of the protein could make
	another tag necessary. In case you have a special request, please contact us.
Characteristics:	Key Benefits:

- · Made to order protein from design to production by highly experienced protein experts.
- · Protein expressed in mammalien cells and purified in one-step affinity chromatography
- The optimized expression system ensures reliability for intracellular, secreted and transmembrane proteins.
- · State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

If you are not interested in a full length protein, please contact us for individual protein fragments.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Target Details

Target:	HDAC8	
Alternative Name:	Hdac8 (HDAC8 Products)	
Background:	Histone deacetylase 8 (HD8) (EC 3.5.1.98) (Protein deacetylase HDAC8) (EC 3.5.1) (Protein	
	decrotonylase HDAC8) (EC 3.5.1),FUNCTION: Histone deacetylase that catalyzes the	
	deacetylation of lysine residues on the N-terminal part of the core histones (H2A, H2B, H3 and	
	H4). Histone deacetylation gives a tag for epigenetic repression and plays an important role in	
	transcriptional regulation, cell cycle progression and developmental events. Histone	
	deacetylases act via the formation of large multiprotein complexes. Also involved in the	
	deacetylation of cohesin complex protein SMC3 regulating release of cohesin complexes from	
	chromatin. May play a role in smooth muscle cell contractility. In addition to protein	
	deacetylase activity, also has protein-lysine deacylase activity: acts as a protein decrotonylase	
	by mediating decrotonylation ((2E)-butenoyl) of histones. {ECO:0000250 UniProtKB:Q9BY41}.	
Molecular Weight:	41.8 kDa	
UniProt:	Q8VH37	
Pathways:	Cellular Glucan Metabolic Process
