

## Datasheet for ABIN7560695 GEMIN7 Protein (AA 1-129) (His tag)

Overview Quantity: 1 mg GEMIN7 Target: Protein Characteristics: AA 1-129 Origin: Mouse Source: HEK-293 Cells Protein Type: Recombinant Purification tag / Conjugate: This GEMIN7 protein is labelled with His tag. Application: SDS-PAGE (SDS), Western Blotting (WB)

## Product Details

Purpose:	Custom-made recombinat Gemin7 Protein expressed in mammalien cells.
Sequence:	MQSPLTIPVP VPVLRLPRGP DGFSRGFASD GRRTILRPEV GEGHIQDPPE SQEQRARATL
	RERYLRSLLA MVGHPVSFTL HEGVHVTAQF GATDLDVANF YVSQLQTPIG VQAEALLRCS
	DIISYSFKL Sequence without tag. The proposed Purification-Tag is based on experiences
	with the expression system, a different complexity of the protein could make another tag
	necessary. In case you have a special request, please contact us.
Characteristics:	Key Benefits:
	Made to order protein - from design to production - by highly experienced protein experts.
	Protein expressed in mammalien cells and purified in one-step affinity chromatography
	The optimized expression system ensures reliability for intracellular, secreted and
	transmembrane proteins.
	State-of-the-art algorithm used for plasmid design (Gene synthesis).

All rights reserved. This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

If you are not interested in a full length protein, please contact us for individual protein fragments.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Purity:	> 90 % as determined by Bis-Tris Page, Western Blot
Grade:	custom-made

## Target Details

Target:	GEMIN7
Alternative Name:	Gemin7 (GEMIN7 Products)
Background:	Gem-associated protein 7 (Gemin-7),FUNCTION: The SMN complex catalyzes the assembly of small nuclear ribonucleoproteins (snRNPs), the building blocks of the spliceosome, and thereby plays an important role in the splicing of cellular pre-mRNAs. Most spliceosomal snRNPs contain a common set of Sm proteins SNRPB, SNRPD1, SNRPD2, SNRPD3, SNRPE, SNRPF and SNRPG that assemble in a heptameric protein ring on the Sm site of the small nuclear RNA to form the core snRNP (Sm core). In the cytosol, the Sm proteins SNRPD1, SNRPD2, SNRPD2, SNRPE, SNRPF, and SNRPG are trapped in an inactive 6S plCln-Sm complex by the chaperone CLNS1A that controls the assembly of the core snRNP. To assemble core snRNPs, the SMN complex accepts the trapped 5Sm proteins from CLNS1A forming an intermediate. Binding of snRNA inside 5Sm triggers eviction of the SMN complex, thereby allowing binding of SNRPD3 and SNRPB to complete assembly of the core snRNP (By similarity). {ECO:0000250 UniProtKB:Q9H840}.
Molecular Weight:	14.3 kDa
UniProt:	Q9CWY4
Pathways:	Ribonucleoprotein Complex Subunit Organization

Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	12 months
