transmembrane proteins.

- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

If you are not interested in a full length protein, please contact us for individual protein fragments.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Background:	Peptidyl-prolyl cis-trans isomerase-like 1 (PPIase) (EC 5.2.1.8) (Rotamase PPIL1),FUNCTION: Involved in pre-mRNA splicing as component of the spliceosome (PubMed:33220177). PPIases accelerate the folding of proteins. It catalyzes the cis-trans isomerization of proline imidic peptide bonds in oligopeptides (By similarity). Catalyzes prolyl peptide bond isomerization in CDC40/PRP17 (By similarity). Plays an important role in embryonic brain development, this function is independent of its isomerase activity (PubMed:33220177). {ECO:0000250 UniProtKB:Q9Y3C6, ECO:0000269 PubMed:33220177}.
