	This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.
	If you are not interested in a full length protein, please contact us for individual protein fragments.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

## Target Details

Target:	POLR3H
Alternative Name:	Polr3h (POLR3H Products)
Background:	DNA-directed RNA polymerase III subunit RPC8 (DNA-directed RNA polymerase III subunit H)
	(RNA polymerase III subunit C7),FUNCTION: DNA-dependent RNA polymerase catalyzes the
	transcription of DNA into RNA using the four ribonucleoside triphosphates as substrates (By
	similarity). Specific peripheric component of RNA polymerase III (Pol III) which synthesizes
	small non-coding RNAs including 5S rRNA, snRNAs, tRNAs and miRNAs from at least 500
	distinct genomic loci. With CRCP/RPC9 forms a mobile stalk that protrudes from Pol III core
	and functions primarily in transcription initiation (By similarity). Pol III plays a key role in sensing
	and limiting infection by intracellular bacteria and DNA viruses. Acts as nuclear and cytosolic
	DNA sensor involved in innate immune response. Can sense non-self dsDNA that serves as
	template for transcription into dsRNA. The non-self RNA polymerase III transcripts, such as
	Epstein-Barr virus-encoded RNAs (EBERs) induce type I interferon and NF-kappa-B through the
	RIG-I pathway (By similarity). {ECO:0000250, ECO:0000250 UniProtKB:094285,
	EC0:0000250 UniProtKB:Q9Y535}.
Molecular Weight:	22.9 kDa
UniProt:	Q9D2C6
