This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

If you are not interested in a full length protein, please contact us for individual protein fragments.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Target Details

Target:	POLR2D
Alternative Name:	Polr2d (POLR2D Products)
Background:	DNA-directed RNA polymerase II subunit RPB4 (RNA polymerase II subunit B4) (DNA-directed
	RNA polymerase II subunit D),FUNCTION: Core component of RNA polymerase II (Pol II), a
	DNA-dependent RNA polymerase which synthesizes mRNA precursors and many functional
	non-coding RNAs using the four ribonucleoside triphosphates as substrates. Pol II is the centra
	component of the basal RNA polymerase II transcription machinery. It is composed of mobile
	elements that move relative to each other. POLR2D/RPB4 is part of a subcomplex with
	POLR2G/RPB7 that binds to a pocket formed by POLR2A/RPB1, POLR2B/RPB2 and
	POLR2F/RPABC2 at the base of the clamp element. The POLR2D/RPB4-POLR2G/RPB7
	subcomplex seems to lock the clamp via POLR2G/RPB7 in the closed conformation thus
	preventing double-stranded DNA to enter the active site cleft. The POLR2D/RPB4-
	POLR2G/RPB7 subcomplex binds single-stranded DNA and RNA.
