

Datasheet for ABIN7561106 KCNE2 Protein (AA 1-123) (His tag)

Overview Quantity: 1 mg KCNE2 Target: Protein Characteristics: AA 1-123 Origin: Mouse HEK-293 Cells Source: Protein Type: Recombinant Purification tag / Conjugate: This KCNE2 protein is labelled with His tag. **Product Details** Custom-made recombinant Kcne2 Protein expressed in mammalian cells. Purpose: Sequence: MATLANLTQT LEDAFKKIFI TYMDSWRRNT TAEEQALQAR VDAENFYYVI LYLMVMIGMF SFIVVAILVS TVKSKRREHS QHPYHQYIVE DWQEKYKSQI LHLEDSKATI HENMGATGFT VSP Sequence without tag. The proposed Purification-Tag is based on experiences with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us. Specificity: If you are looking for a specific domain and are interested in a partial protein or a different isoform, please contact us regarding an individual offer. Characteristics: Key Benefits: • Made to order protein - from design to production - by highly experienced protein experts. · Protein expressed in mammalian cells and purified in one-step affinity chromatography · The optimized expression system ensures reliability for intracellular, secreted and

transmembrane proteins.

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

If you are not interested in a full length protein, please contact us for individual protein fragments.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

 Purity:
 > 90 % as determined by Bis-Tris PAGE, anti-tag ELISA, Western Blot and analytical SEC (HPLC)

 Grade:
 custom-made

Target Details

Target:	KCNE2
Alternative Name:	Kcne2 (KCNE2 Products)
Background:	Potassium voltage-gated channel subfamily E member 2 (MinK-related peptide 1) (Minimum
	potassium ion channel-related peptide 1) (Potassium channel subunit beta MiRP1),FUNCTION
	Ancillary protein that assembles as a beta subunit with a voltage-gated potassium channel
	complex of pore-forming alpha subunits. Modulates the gating kinetics and enhances stability
	of the channel complex. Assembled with KCNB1 modulates the gating characteristics of the
	delayed rectifier voltage-dependent potassium channel KCNB1. Associated with KCNH2/HERC
	is proposed to form the rapidly activating component of the delayed rectifying potassium
	current in heart (IKr). May associate with KCNQ2 and/or KCNQ3 and modulate the native M-
	type current. May associate with HCN1 and HCN2 and increase potassium current (By
	similarity). Interacts with KCNQ1, forms a heterooligomer complex leading to currents with an
	apparently instantaneous activation, a rapid deactivation process and a linear current-voltage
	relationship and decreases the amplitude of the outward current (By similarity). KCNQ1-KCNE:
	channel associates with Na(+)-coupled myo-inositol symporter in the apical membrane of
	choroid plexus epithelium and regulates the myo-inositol gradient between blood and
	cerebrospinal fluid with an impact on neuron excitability. {ECO:0000250 UniProtKB:P63161,
	ECO:0000250 UniProtKB:Q9Y6J6, ECO:0000269 PubMed:24595108}.
Molecular Weight:	14.4 kDa

Target Details	
UniProt:	Q9D808
Application Details	
Application Notes:	We expect the protein to work for functional studies. As the protein has not been tested for
	functional studies yet we cannot offer a guarantee though.
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	12 months
