Characteristics:

Key Benefits:

- Made to order protein - from design to production - by highly experienced protein experts.
- Protein expressed in mammalian cells and purified in one-step affinity chromatography
- The optimized expression system ensures reliability for intracellular, secreted and transmembrane proteins.
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

If you are not interested in a full length protein, please contact us for individual protein fragments.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Purity:

> 90 % as determined by Bis-Tris PAGE, anti-tag ELISA, Western Blot and analytical SEC (HPLC)

custom-made

Target Details

Target:

F-Box Protein 3 (FBXO3)

Alternative Name:

Fbxo3 ([FBXO3 Products](#))

Background:

F-box only protein 3,FUNCTION: Substrate recognition component of the SCF (SKP1-CUL1-F-box protein)-type E3 ubiquitin ligase complex, SCF(FBXO3), which mediates the ubiquitination and subsequent proteasomal degradation of target proteins (By similarity). Mediates the ubiquitination of HIPK2 and probably that of EP300, leading to rapid degradation by the proteasome (By similarity). In the presence of PML, HIPK2 ubiquitination still occurs, but degradation is prevented (By similarity). PML, HIPK2 and FBXO3 may act synergically to activate p53/TP53-dependent transactivation (By similarity). The SCF(FBXO3) also acts as a regulator of inflammation by mediating ubiquitination and degradation of FBXL2: specifically recognizes FBXL2 phosphorylated at 'Thr-404' and promotes its ubiquitination (PubMed:23542741). {ECO:0000250|UniProtKB:Q9UK99, ECO:0000269|PubMed:23542741}.
