## Product Details

- Made to order protein - from design to production - by highly experienced protein experts.
- Protein expressed in mammalian cells and purified in one-step affinity chromatography
- The optimized expression system ensures reliability for intracellular, secreted and transmembrane proteins.
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

If you are not interested in a full length protein, please contact us for individual protein fragments.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Background:	<p>Guanine nucleotide-binding protein G(q) subunit alpha (Guanine nucleotide-binding protein alpha-q),FUNCTION: Guanine nucleotide-binding proteins (G proteins) are involved as modulators or transducers in various transmembrane signaling systems (PubMed:9687499). Required for platelet activation (PubMed:9296496). Regulates B-cell selection and survival and is required to prevent B-cell-dependent autoimmunity (PubMed:20624888). Regulates chemotaxis of BM-derived neutrophils and dendritic cells (in vitro) (PubMed:17938235). Transduces FFAR4 signaling in response to long-chain fatty acids (LCFAs) (By similarity). Together with GNA11, required for heart development (PubMed:9687499).</p> <p>{ECO:0000250 UniProtKB:P50148, ECO:0000269 PubMed:17938235, ECO:0000269 PubMed:20624888, ECO:0000269 PubMed:9296496, ECO:0000269 PubMed:9687499}.</p>
