### Characteristics:

#### Key Benefits:

- Made to order protein - from design to production - by highly experienced protein experts.
- Protein expressed in mammalian cells and purified in one-step affinity chromatography
- The optimized expression system ensures reliability for intracellular, secreted and transmembrane proteins.
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

If you are not interested in a full length protein, please contact us for individual protein fragments.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

### Purity:

> 90 % as determined by Bis-Tris PAGE, anti-tag ELISA, Western Blot and analytical SEC (HPLC)

### Grade:

custom-made

## Target Details

### Target:

CLK1

### Alternative Name:

Clk1 ([CLK1 Products](#))

### Background:

Dual specificity protein kinase CLK1 (EC 2.7.12.1) (CDC-like kinase 1) (Protein kinase STY),FUNCTION: Dual specificity kinase acting on both serine/threonine and tyrosine-containing substrates (PubMed:1825055, PubMed:1986248, PubMed:9307018). Phosphorylates serine- and arginine-rich (SR) proteins of the spliceosomal complex and may be a constituent of a network of regulatory mechanisms that enable SR proteins to control RNA splicing. Phosphorylates: SRSF1, SRSF3 and PTPN1 (PubMed:8617202, PubMed:9307018). Regulates the alternative splicing of tissue factor (F3) pre-mRNA in endothelial cells (By similarity). {ECO:0000250|UniProtKB:P49759, ECO:0000269|PubMed:1825055, ECO:0000269|PubMed:1986248, ECO:0000269|PubMed:8617202, ECO:0000269|PubMed:9307018}.
