	This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.
	If you are not interested in a full length protein, please contact us for individual protein fragments.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Grade:	custom-made

## Target Details

Target:	KCNK2	
Alternative Name:	Kcnk2 (KCNK2 Products)	
Background:	Potassium channel subfamily K member 2 (Outward rectifying potassium channel protein	
	TREK-1) (TREK-1 K(+) channel subunit) (Two pore potassium channel TPKC1),FUNCTION: lor	
	channel that contributes to passive transmembrane potassium transport. Reversibly converts	
	between a voltage-insensitive potassium leak channel and a voltage-dependent outward	
	rectifying potassium channel in a phosphorylation-dependent manner. In astrocytes, forms	
	mostly heterodimeric potassium channels with KCNK1, with only a minor proportion of	
	functional channels containing homodimeric KCNK2 (PubMed:24496152). In astrocytes, the	
	heterodimer formed by KCNK1 and KCNK2 is required for rapid glutamate release in response	
	to activation of G-protein coupled receptors, such as F2R and CNR1 (PubMed:24496152).

Molecular Weight:	46.8 kDa
