

Datasheet for ABIN7563942

PKC mu Protein (AA 1-918) (His tag)

[Go to Product page](#)

Overview

Quantity:	1 mg
Target:	PKC mu (PRKD1)
Protein Characteristics:	AA 1-918
Origin:	Mouse
Source:	HEK-293 Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This PKC mu protein is labelled with His tag.
Application:	SDS-PAGE (SDS), Western Blotting (WB)

Product Details

Purpose:	Custom-made recombinat Prkd1 Protein expressed in mammalian cells.
Sequence:	<p>MSVPPLLRPP SPLLPAAAV AAAAAALVPG SGPAPFPAPG AAPAGGISFH LQIGLSREPV</p> <p>LLLQDSSGDY SLAHVREMAC SIVDQKFPEC GFYGLYDKIL LFRHDPASDN ILQLVKIASD</p> <p>IQEGDLIEVV LSASATFEDF QIRPHALFVH SYRAPAFCDH CGEMLWGLVR QGLKCEGCGL</p> <p>NYHKRCAFKI PNNCSGVRRL RLSNVSLTGL GTVRTASAEF STSVPDEPLL SPVSPGFQEQK</p> <p>SPSEFIGRE KRSNSQSYIG RPIQLDKLLM SKVKVPHTFV IHSYTRPTVC QFCKKLLKGL</p> <p>FRQGLQCKDC RFNCHKRCAP KVPNNCLGEV TINGELLSPG AESDVVMEEG SDDNDSEKNS</p> <p>GLMDDMDEAM VQDTEMALAE GQSGGAEMQD PDADQEDSNR TISPSTSNNI PLMRVVQSVK</p> <p>HTKRRSSTVM KEGWMVHYTS KDTLRKRHYW RLDSKCITLF QNDTGSRYK EIPLSEILCL</p> <p>EPAKPSALTP VGATPHCFEI TTANVYYYVG ENVVNPSSSP PNNSVLPSGI GPDVARMWEV</p> <p>AIQHALMPVI PKGSSVGSGS NSHKDISVSI SVSNCQIQEN VDISTVYQIF PDEVLGSGQF</p> <p>GIVYGGKHRK TGRDVAIKII DKLRFPTKQE SQLRNEVAIL QNLHHPGVVN LECMFETPER</p>

PEAEEREMKA LSERVSIL **Sequence without tag. The proposed Purification-Tag is based on experiences with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.**

Characteristics:	<p>Key Benefits:</p> <ul style="list-style-type: none">• Made to order protein - from design to production - by highly experienced protein experts.• Protein expressed in mammalian cells and purified in one-step affinity chromatography• The optimized expression system ensures reliability for intracellular, secreted and transmembrane proteins.• State-of-the-art algorithm used for plasmid design (Gene synthesis). <p>This protein is a made-to-order protein and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.</p> <p>If you are not interested in a full length protein, please contact us for individual protein fragments.</p> <p>The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.</p>

Target Details

Target:	PKC mu (PRKD1)
Alternative Name:	Prkd1 (PRKD1 Products)
Background:	Serine/threonine-protein kinase D1 (EC 2.7.11.13) (Protein kinase C mu type) (Protein kinase D) (nPKC-D1) (nPKC-mu),FUNCTION: Serine/threonine-protein kinase that converts transient diacylglycerol (DAG) signals into prolonged physiological effects downstream of PKC, and is involved in the regulation of MAPK8/JNK1 and Ras signaling, Golgi membrane integrity and trafficking, cell survival through NF-kappa-B activation, cell migration, cell differentiation by mediating HDAC7 nuclear export, cell proliferation via MAPK1/3 (ERK1/2) signaling, and plays a

role in cardiac hypertrophy, VEGFA-induced angiogenesis, genotoxic-induced apoptosis and flagellin-stimulated inflammatory response (PubMed:12407104, PubMed:14963034, PubMed:15192707, PubMed:20463010, PubMed:24161911, PubMed:28716882).

Phosphorylates the epidermal growth factor receptor (EGFR) on dual threonine residues, which leads to the suppression of epidermal growth factor (EGF)-induced MAPK8/JNK1 activation and subsequent JUN phosphorylation. Phosphorylates RIN1, inducing RIN1 binding to 14-3-3 proteins YWHAB, YWHAH and YWHAZ and increased competition with RAF1 for binding to GTP-bound form of Ras proteins (NRAS, HRAS and KRAS) (PubMed:11784866). Acts downstream of the heterotrimeric G-protein beta/gamma-subunit complex to maintain the structural integrity of the Golgi membranes, and is required for protein transport along the secretory pathway. In the trans-Golgi network (TGN), regulates the fission of transport vesicles that are on their way to the plasma membrane (PubMed:11239398). May act by activating the lipid kinase phosphatidylinositol 4-kinase beta (PI4KB) at the TGN for the local synthesis of phosphorylated inositol lipids, which induces a sequential production of DAG, phosphatidic acid (PA) and lyso-PA (LPA) that are necessary for membrane fission and generation of specific transport carriers to the cell surface. Under oxidative stress, is phosphorylated at Tyr-469 via SRC-ABL1 and contributes to cell survival by activating IKK complex and subsequent nuclear translocation and activation of NFkB1. Involved in cell migration by regulating integrin alpha-5/beta-3 recycling and promoting its recruitment in newly forming focal adhesion (PubMed:15192707). In osteoblast differentiation, mediates the bone morphogenetic protein 2 (BMP2)-induced nuclear export of HDAC7, which results in the inhibition of HDAC7 transcriptional repression of RUNX2 (PubMed:19029091). In neurons, plays an important role in neuronal polarity by regulating the biogenesis of TGN-derived dendritic vesicles, and is involved in the maintenance of dendritic arborization and Golgi structure in hippocampal cells. May potentiate mitogenesis induced by the neuropeptide bombesin or vasopressin by mediating an increase in the duration of MAPK1/3 (ERK1/2) signaling, which leads to accumulation of immediate-early gene products including FOS that stimulate cell cycle progression. Plays an important role in the proliferative response induced by low calcium in keratinocytes, through sustained activation of MAPK1/3 (ERK1/2) pathway (PubMed:14963034, PubMed:20463010). Downstream of novel PKC signaling, plays a role in cardiac hypertrophy by phosphorylating HDAC5, which in turn triggers XPO1/CRM1-dependent nuclear export of HDAC5, MEF2A transcriptional activation and induction of downstream target genes that promote myocyte hypertrophy and pathological cardiac remodeling (PubMed:24161911). Mediates cardiac troponin I (TNNI3) phosphorylation at the PKA sites, which results in reduced myofilament calcium sensitivity, and accelerated crossbridge cycling kinetics. The PRKD1-HDAC5 pathway is also involved in angiogenesis by mediating VEGFA-induced specific subset of gene

Target Details

expression, cell migration, and tube formation. In response to VEGFA, is necessary and required for HDAC7 phosphorylation which induces HDAC7 nuclear export and endothelial cell proliferation and migration. During apoptosis induced by cytarabine and other genotoxic agents, PRKD1 is cleaved by caspase-3 at Asp-378, resulting in activation of its kinase function and increased sensitivity of cells to the cytotoxic effects of genotoxic agents. In epithelial cells, is required for transducing flagellin-stimulated inflammatory responses by binding and phosphorylating TLR5, which contributes to MAPK14/p38 activation and production of inflammatory cytokines. Acts as an activator of NLRP3 inflammasome assembly by mediating phosphorylation of NLRP3 (PubMed:28716882). May play a role in inflammatory response by mediating activation of NF-kappa-B. May be involved in pain transmission by directly modulating TRPV1 receptor. Plays a role in activated KRAS-mediated stabilization of ZNF304 in colorectal cancer (CRC) cells (By similarity). Regulates nuclear translocation of transcription factor TFEB in macrophages upon live S.enterica infection (PubMed:27184844).

Molecular Weight: 102.0 kDa

UniProt: [Q62101](#)

Pathways: [Myometrial Relaxation and Contraction](#)

Application Details

Application Notes: In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.

Restrictions: For Research Use only

Handling

Format: Liquid

Buffer: The buffer composition is at the discretion of the manufacturer.

Handling Advice: Avoid repeated freeze-thaw cycles.

Handling

Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	12 months
