Target Details

Background: Decoy Receptor 3, Tumor Necrosis Factor Receptor Superfamily Member 6B, TNFRSF6B, M68

Decoy receptor 3 (DcR3, TNFRSF6B, M68) is a member of the TNF receptor superfamily. DcR3 shares sequence identity with OPG (31 %), TNF-RII (29 %) and Fas (17 %) and is expressed in a variety of different tissues and at high levels in many malignant tumors. Ligands of DcR3 include Fas ligand, homologous to lymphotoxin showing inducible expression and competing with HSV glycoprotein D for herpes virus entry mediator (a receptor expressed by T lymphocytes), TNF-like molecule 1A and heparan sulfate proteoglycans. DcR3 modulates the function of T cells, dendritic cells and macrophages. DcR3/Fc fusion proteins can bind to human and mouse B cells and suppress the activation of B cells.
