Alternative Name:	CASC3 (CASC3 Products)	
Background:	Synonyms: Barentsz protein, Btz, Cancer susceptibility candidate gene 3 protein, Metastatic	
Buokground.	lymph node protein 51, MLN 51 protein, MLN51, Protein barentsz, Protein CASC3, Protein MLN	
	51, CASC3_HUMAN.	
	Background: The multiprotein exon junction complex (EJC) is deposited on mRNAs upstream	
	of exonexon junctions as a consequence of pre-mRNA splicing. In mammalian cells, this	
	complex serves as a key modulator of spliced mRNA metabolism. MLN51 is a	
	nucleocytoplasmic shuttling protein that is overexpressed in breast cancer. The function of	
	MLN51 in mammals remains elusive. Its fly homolog, named barentsz, as well as the proteins	
	mago nashi and tsunagi have been shown to be required for proper oskar mRNA localization to	
	the posterior pole of the oocyte. Magoh and Y14, the human homologs of mago nashi and	
	tsunagi, are core components of the exon junction complex (EJC). The EJC is assembled on	
	spliced mRNAs and plays important roles in post-splicing events including mRNA export,	
	nonsense-mediated mRNA decay, and translation. Human MLN51 is an RNA-binding protein	
	present in ribonucleo-protein complexes.
