	Background: This gene encodes a member of the "fused gene" family of proteins, which contain
	N terminus EF hand domains and multiple tandem peptide repeats. The encoded protein
	contains two EF hand Ca2+ binding domains in its N terminus and two glutamine and threonine
	rich 60 amino acid repeats in its C terminus. This gene, also known as squamous epithelial heat
	shock protein 53, may play a role in the mucosal/epithelial immune response and epidermal
	differentiation.
