

Datasheet for ABIN7590874

SELENBP2 Protein (AA 1-487) (His tag)

Go to Product page

_					
	W	0	rv	10	W

Quantity:	100 μg	
Target:	SELENBP2	
Protein Characteristics:	AA 1-487	
Origin:	Arabidopsis thaliana	
Source:	Yeast	
Protein Type:	Recombinant	
Purification tag / Conjugate:	This SELENBP2 protein is labelled with His tag.	
Application:	ELISA

Please inquire if you are interested in this recombinant protein expressed in E. coli, mammalien cells or by baculovirus infection. Be aware about differences in price and lead time.		

Product Details > 90 % Purity: **Target Details** SELENBP2 Target: Selenium-binding protein 2 (SBP2) (SELENBP2 Products) Alternative Name Background: Recommended name: Selenium-binding protein 2. Alternative name(s): Protein EMBRYO SAC DEVELOPMENT ARREST 38 UniProt: Q93WN0 **Application Details** The yeast protein expression system is the most economical and efficient eukaryotic system Comment: for secretion and intracellular expression. A protein expressed by the mammalian cell system is of very high-quality and close to the natural protein. But the low expression level, the high cost of medium and the culture conditions restrict the promotion of mammalian cell expression systems. The yeast protein expression system serve as a eukaryotic system integrate the advantages of the mammalian cell expression system. A protein expressed by yeast system could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the native protein conformation. It can be used to produce protein material with high added value that is very close to the natural protein. Our proteins produced by yeast expression system has been used as raw materials for downstream preparation of monoclonal antibodies. Restrictions: For Research Use only Handling Format: Lyophilized Concentration: 0.2-2 mg/mL Buffer: Tris-based buffer, 50 % glycerol
