Target Details

Target:	ADAM22
Alternative Name:	ADAM22 (ADAM22 Products)
Background:	Synonyms: Disintegrin and metalloproteinase domain-containing protein 22 (ADAM 22) Target Description: ADAM22 is a member of the ADAM (a disintegrin and metalloproteinase) family and predominantly expressed in brain. ADAM 22 is non-catalytic unlike other proteins in the family as it does not contain a zinc binding domain. ADAM22 is a post synaptic neuron receptor for LGI 1 and also binds LGI4. ADAM22 serve as an integrin ligand. Mutations in ADAM22 are implicated in early infantile epileptic encephalopathy-61 and Brachydactyly type C. Gene Name Alternatives: Adam22
Molecular Weight:	90 kDa
