Alternative Name:	RBM3 (RBM3 Products)
Background:	<p>Synonyms: Putative RNA binding protein 3, RNA binding mot RNP1, RRM protein 3, RNA binding mot protein 3, RNPL, RP23-2716.7, RBM3_HUMAN.</p> <p>Background: This gene is a member of the glycine-rich RNA-binding protein family and encodes a protein with one RNA recognition motif (RRM) domain. Expression of this gene is induced by cold shock and low oxygen tension. A pseudogene exists on chromosome 1. Multiple alternatively spliced transcript variants that are predicted to encode different isoforms have been characterized although some of these variants fit nonsense-mediated decay (NMD) criteria. [provided by RefSeq, Jul 2008].</p>
