	ANXA9_HUMAN .
	Background: ANXA9 may act as a low affinity receptor for acetylcholine and is expressed in the
	stratified squamous skin epithelium, but not in epithelia of other types (at protein level). ANXA9
	is one of the target molecules recognized by auto in patients with pemphigus vulgaris, a rare,
	autoimmune skin disease in which epidermal blisters occur as the result of the loss of cell-cell
	adhesion.
