Target Details

Target:	LSM7
Alternative Name:	LSM7 (LSM7 Products)
Background:	Synonyms: Mediator of RNA polymerase II transcription subunit 6, Activator-recruited cofactor 33 kDa component, ARC33, Mediator complex subunit 6, hMed6, Renal carcinoma antigen NY-REN-28, MED6, ARC33 Background: U6 snRNA-associated Sm-like protein LSm7 is a protein that in humans is encoded by the LSM7 gene. Sm-like proteins were identified in a variety of organisms based on sequence homology with the Sm protein family (see SNRPD2, MIM 601061). Sm-like proteins contain the Sm sequence motif, which consists of 2 regions separated by a linker of variable length that folds as a loop. The Sm-like proteins are thought to form a stable heteromer present in tri-snRNP particles, which are important for pre-mRNA splicing.
Molecular Weight:	12 kDa
Gene ID:	51690
