## Target Details

Alternative Name:	PCDHA11 (PCDHA11 Products)	
Background:	This gene is a member of the protocadherin alpha gene cluster, one of three related gene	
	clusters tandemly linked on chromosome five that demonstrate an unusual genomic	
	organization similar to that of B-cell and T-cell receptor gene clusters. The alpha gene cluster is	
	composed of 15 cadherin superfamily genes related to the mouse CNR genes and consists of	
	13 highly similar and 2 more distantly related coding sequences. The tandem array of 15 N-	
	terminal exons, or variable exons, are followed by downstream C-terminal exons, or constant	
	exons, which are shared by all genes in the cluster. The large, uninterrupted N-terminal exons	
	each encode six cadherin ectodomains while the C-terminal exons encode the cytoplasmic	
	domain. These neural cadherin-like cell adhesion proteins are integral plasma membrane	
	proteins that most likely play a critical role in the establishment and function of specific cell-cell	
	connections in the brain. Alternative splicing has been observed and additional variants have	
	been suggested but their full-length nature has yet to be determined.	
Molecular Weight:	150-170 kDa	
Gene ID:	56138	
UniProt:	Q9Y5I1
