Target Details

Target:	PPP1R15B
Alternative Name:	PPP1R15B (PPP1R15B Products)
Background:	Synonyms: Protein NDRG3,N-myc downstream-regulated gene 3 protein,NDRG3,
	Tissue Specificity: Ubiquitous. Highly expressed in brain
	Background: PPP1R15B(Protein phosphatase 1, regulatory subunit 15b), also called CREP,
	promotes dephosphorylation of the transcription initiation factor EIF2-alpha through
	recruitment of protein phosphatase-1(PP1) catalytic subunits. The PPP1R15B gene is mapped
	to chromosome 1q32.1 based on an alignment of the PPP1R15B sequence by Hartz (2010).
	Harding et al.(2009) obtained Ppp1r15b -/- mice at a mendelian ratio. However, Ppp1r15b -/-
	newborns were half the size of their wildtype littermates, were notably pale, and failed to nurse
	and none survived the first day of postnatal life. Ppp1r15b -/- embryos that were also
	homozygous for an Eif2-alpha mutation that prevented Eif2-alpha phosphorylation were
	normalized, including elevated birth size and restored red blood cell count, compared with
	Ppp1r15b -/- embryos with wildtype Eif2-alpha.
Molecular Weight:	110 kDa
Gene ID:	84919
Pathways:	ER-Nucleus Signaling
