Target Details

Target:	MAP2K5
Alternative Name:	MAP2K5 (MAP2K5 Products)
Background:	Synonyms: Intercellular adhesion molecule 2, ICAM-2, CD102, ICAM2
	Tissue Specificity: Highly expressed in lung. Also detected in pancreas, kidney, small intestine,
	ovary, testis, prostate and mammary gland. In lung, it is found in alveolar type II cells but not in
	bronchiolar epithelium.
	Background: Dual specificity mitogen-activated protein kinase kinase 5 is an enzyme that in
	humans is encoded by the MAP2K5 gene. The protein encoded by this gene is a dual specificity
	protein kinase that belongs to the MAP kinase kinase family. This kinase specifically interacts
	with and activates MAPK7/ERK5. This kinase itself can be phosphorylated and activated by
	MAP3K3/MEKK3, as well as by atypical protein kinase C isoforms (aPKCs). The signal cascade
	mediated by this kinase is involved in growth factor stimulated cell proliferation and muscle cell
	differentiation. Three alternatively spliced transcript variants of this gene encoding distinct
	isoforms have been described.
Molecular Weight:	50 kDa
Gene ID:	5607
UniProt:	Q13163
Pathways:	MAPK Signaling, Neurotrophin Signaling Pathway
