	homolog 1, Dachsund homolog 1.		
	Background: DACH1 is similar to the Drosophila melanogaster dachshund gene, which encodes		
	a nuclear factor essential for determining cell fates in the eye, leg, and nervous system of the		
	fly. It is a member of the Ski gene family and is thought to be involved in eye development. Four		
	alternatively spliced transcripts encoding different isoforms have been described for this gene.		
	(from Entrez gene). DACH1 has also been found to inhibit oncogene-mediated breast tumor		
	growth via downregulation of cyclin D1. Expression of DACH1 has been found to inversely		
	correlate with metastasis.
