associated protein, CystatinF, Cystatin-F, Cystatin F, Leukocystatin.
Background: The cystatin superfamily encompasses proteins that contain multiple cystatin-like
sequences. Some of the members are active cysteine protease inhibitors, while others have lost
or perhaps never acquired this inhibitory activity. There are three inhibitory families in the
superfamily, including the type 1 cystatins (stefins), type 2 cystatins and the kininogens. The
type 2 cystatin proteins are a class of cysteine proteinase inhibitors found in a variety of human
fluids and secretions. Expression of the protein has been observed in various human cancer cell
lines established from malignant tumors.
