Product Details

Purpose:	YBX1 / Y-box Binding Protein 1 / YB-1 (Tumor Biomarker)(YBX1/2430)
Immunogen:	Recombinant human full-length YBX1 protein
Clone:	YBX1-2430
Isotype:	IgG2b, kappa
Characteristics:	The specificity of this monoclonal antibody to its intended target was validated by HuProt™, Array, containing more than 19,000 full-length human proteins. Y-box binding protein-1 (YBX1) is the prototypic member of the cold shock protein family that fulfills numerous cellular functions. In the nucleus, YBX1 protein orchestrates transcription of proliferation-related genes, whereas in the cytoplasm it associates with mRNA and directs translation. In human tumor entities, such as breast, lung and prostate cancer, cellular YBX1 expression indicates poor clinical outcome, suggesting that YBX1 is an attractive marker to predict patients' prognosis.

Primary antibodies are available purified, or with a selection of fluorescent CF® Dyes and other labels. CF® Dyes offer exceptional brightness and photostability. Note: Conjugates of blue fluorescent dyes like CF®405S and CF®405M are not recommended for detecting low abundance targets, because blue dyes have lower fluorescence and can give higher non-specific background than other dye colors.
