## Application Details

---

Application Notes:	Western Blot: Preliminary experiments gave bands at approx 65 kDa and 70 kDa in Mouse fetal Lung lysates after 1 µg/mL antibody staining. Please note that currently we cannot find an explanation in the literature for the bands we observe given the calculated Peptide ELISA: antibody detection limit dilution 1:16000.
Comment:	<b>Immunocytochemistry:</b> Positive staining of select epithelial cells in the murine Submandibular gland at E18. Recommended concentration 4µg/ml. Data provided by Everest Grant winner Melinda Larsen, State University of New York, Albany, NY.
Restrictions:	For Research Use only
