|                     | Background: Rho GTPases control a variety of cellular processes. There are 3 subtypes of Rho  |  |
|                     | GTPases in the Ras superfamily of small G proteins: RHO, RAC and CDC42. GTPase-activating     |  |
|                     | proteins (GAPs) bind activated forms of Rho GTPases and stimulate GTP hydrolysis. Through     |  |
|                     | this catalytic function, Rho GAPs negatively regulate Rho-mediated signals. GAPs may also     |  |
