Target Details

Background:	<p>Synonyms: Bcl 2 associated transcription factor, Bcl-2-associated transcription factor 1, BCL2 associated transcription factor 1, BCLAF1, BCLF1_HUMAN, Btf.</p> <p>Background: This gene encodes a transcriptional repressor that interacts with several members of the BCL2 family of proteins. Overexpression of this protein induces apoptosis, which can be suppressed by co-expression of BCL2 proteins. The protein localizes to dot-like structures throughout the nucleus, and redistributes to a zone near the nuclear envelope in cells undergoing apoptosis. Multiple transcript variants encoding different isoforms have been found for this gene.</p>
Gene ID:	9774
Pathways:	Positive Regulation of Response to DNA Damage Stimulus
