| | Background: Microtubule plus-end tracking protein that promotes the stabilization of dynamic |
| | microtubules. Involved in the nucleation of noncentrosomal microtubules originating from the |
| | trans-Golgi network (TGN). Required for the polarization of the cytoplasmic microtubule arrays |
| | in migrating cells towards the leading edge of the cell. May act at the cell cortex to enhance the |
| | frequency of rescue of depolymerizing microtubules by attaching their plus-ends to cortical |
| | platforms composed of ERC1 and PHLDB2. This cortical microtubule stabilizing activity is |
| | regulated at least in part by phosphatidylinositol 3-kinase signaling. Also performs a similar |
| | stabilizing function at the kinetochore which is essential for the bipolar alignment of |
| | chromosomes on the mitotic spindle. |
| Gene ID: | 23332 |
| Pathways: | Microtubule Dynamics, M Phase, Maintenance of Protein Location |
