Target Details

Alternative Name:	Fam21c (FAM21C Products)
Background:	Synonyms: FAM21A, Family with sequence similarity 21 member C, Hypothetical protein
	LOC253725, KIAA0592, Protein FAM21C, FA21C_HUMAN.
	Background: Playing a essential role in the fission of tubules that serve as transport
	intermediates during endosome sorting, the WASH complex is present at the surface of
	endosomes and functions to recruit and activate the Arp2/3 complex for induction of actin
	polymerization. FAM21, Putative WASH complex subunit FAM21, is a component of the WASH
	complex. Having undergone evolutionary duplication, four highly homologous family members
	exist including FAM21A, FAM21B, FAM21C and FAM21D. FAM21 links the WASH complex to
	endosomes and is required for WASM-dependent retromer-mediated sorting. Also, by directly
	interacting with CapZ, FAM21 inhibits its anti-capping activity, thereby regulating actin
	dynamics.
