Alternative Name:	Adenylosuccinate Lyase (ADSL Products)
Background:	Synonyms: Adenylosuccinase, Adenylosuccinate lyase, ADSL, AMPS, ASase, ASL, PUR8_HUMAN.
	Background: Adenylsuccinate lyase is involved in both de novo synthesis of purines and
	formation of adenosine monophosphate from inosine monophosphate. It catalyzes two
	reactions in AMP biosynthesis: the removal of a fumarate from succinylaminoimidazole
	carboxamide (SAICA) ribotide to give aminoimidazole carboxamide ribotide (AICA) and removal
	of fumarate from adenylosuccinate to give AMP. Adenylosuccinase deficiency results in
	succinylpurinemic autism, psychomotor retardation, and , in some cases, growth retardation
	associated with muscle wasting and epilepsy. Two transcript variants encoding different
	isoforms have been found for this gene. [provided by RefSeq, Jul 2008].
Pathways:	Ribonucleoside Biosynthetic Process
