Target Details	
Alternative Name:	BMPER (BMPER Products)
Background:	Synonyms: BMP binding endothelial regulator, BMP binding endothelial regulator precursor protein, Bone morphogenetic protein binding endothelial cell precursor derived regulator, CRIM3, Crossveinless 2, CV 2, CV2, hCV2, Protein crossveinless 2, BMPER_HUMAN. Background: This gene encodes a secreted protein that interacts with, and inhibits bone morphogenetic protein (BMP) function. It has been shown to inhibit BMP2- and BMP4- dependent osteoblast differentiation and BMP-dependent differentiation of the chondrogenic cells. Mutations in this gene are associated with a lethal skeletal disorder, diaphanospondylodysostosis. [provided by RefSeq, Dec 2011].BMPER is a BMP-binding protein that is expressed by endothelial cell precursors, has BMP-antagonizing activity, and may play a role in endothelial cell differentiation by modulating local BMP activity. It may also regulate BMP responsiveness in osteoblasts and chondrocytes.
