Target Details

Background:	<p>Synonyms: Aldehyde dehydrogenase 16 family, member A1, Aldehyde dehydrogenase family 16 member A1, MGC10204, A16A1_HUMAN.</p> <p>Background: This gene encodes a member of the aldehyde dehydrogenase superfamily. The family members act on aldehyde substrates and use nicotinamide adenine dinucleotide phosphate (NADP) as a cofactor. This gene is conserved in chimpanzee, dog, cow, mouse, rat, and zebrafish. The protein encoded by this gene interacts with maspardin, a protein that when truncated is responsible for Mast syndrome. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.</p>
