|  | Background: The steady state of protein tyrosyl phosphorylation in cells is regulated by the |
|  | opposing action of tyrosine kinases and protein tyrosine phosphatases (PTPs). Several groups |
|  | have independently identified a non transmembrane PTP, designated SHPTP1 (also known as |
|  | PTP1C, HCP and SHP), which is primarily expressed in hematopoietic cells and characterized |
|  | by the presence of two SH2 domains N terminal to the PTP domain. A second and much more |
|  | widely expressed PTP with SH2 domains, SHPTP2 (also designated PTP1D and Syp), has been |
| identified. SHP2 is a protein tyrosine phosphatase that is widely expressed and plays a |  |
