	binding cassette transporter 2, ATP binding cassette, sub family A ABC1, member 2, ATP
	binding cassette, sub family A, member 2, ATP binding cassette, sub family B MDR/TAP,
	member 2,ABCA2_HUMAN.
	Background: The membrane-associated protein encoded by this gene is a member of the
	superfamily of ATP-binding cassette (ABC) transporters. ABC proteins transport various
	molecules across extra- and intracellular membranes. ABC genes are divided into seven distinct
	subfamilies (ABC1, MDR/TAP, MRP, ALD, OABP, GCN20, White). This protein is a member of the
	ABC1 subfamily. Members of the ABC1 subfamily comprise the only major ABC subfamily
	found exclusively in multicellular eukaryotes. This protein is highly expressed in brain tissue and
	may play a role in macrophage lipid metabolism and neural development. Two transcript
	variants encoding different isoforms have been found for this gene (from EntrezGene).
