Alternative Name:	BCLAF1 (BCLAF1 Products)
Background:	Synonyms: Bcl 2 associated transcription factor, Bcl-2-associated transcription factor 1, BCL2

Target Details

associated transcription factor 1, BCLAF1, BCLF1_HUMAN, Btf.

Background: This gene encodes a transcriptional repressor that interacts with several members of the BCL2 family of proteins. Overexpression of this protein induces apoptosis, which can be suppressed by co-expression of BCL2 proteins. The protein localizes to dot-like structures throughout the nucleus, and redistributes to a zone near the nuclear envelope in cells undergoing apoptosis. Multiple transcript variants encoding different isoforms have been found for this gene.
