| | Background: BTG2 is a member of the BTG/Tob family. This family has structurally related | |
| | proteins that appear to have antiproliferative properties. BTG2 is involved in the regulation of | |
| | the G1/S transition of the cell cycle. It modulates transcription regulation mediated by | |
| | ESR1(referenced from Entrez Gene). BTG2 expression is induced in vivo during neurogenesis, | |
| | and the gene is transiently expressed in vitro in rat pheochromocytoma PC12 cells after | |
| | induction of neuronal differentiation by addition of nerve growth factor (NGF), suggesting that | |
| | BTG2 is functionally significant during the neuronal differentiation process (PMID: 12360398). | |
