|                     | Background: The protein encoded by this gene is a member of the BTG/Tob family. This family      |  |  |
|                     | has structurally related proteins that appear to have antiproliferative properties. This encoded |  |  |
|                     | protein might play a role in neurogenesis in the central nervous system. Two transcript variants |  |  |
|                     | encoding different isoforms have been found for this gene. [provided by RefSeq, Aug 2008].       |  |  |
