Background:	Synonyms: CA 7, CA VII, CA-VII, Ca7, CAH7_HUMAN, Car7, Carbonate dehydratase VII, Carbonic
	anhydrase 7, Carbonic anhydrase VII, Carbonic dehydratase, CAVII.
	Background: Carbonic anhydrases are a large family of zincmetalloenzymes that catalyze the
	reversible hydration of carbondioxide. They participate in a variety of biological
	processes, including respiration, calcification, acid-base balance, boneresorption, and the
	formation of aqueous humor, cerebrospinalfluid, saliva, and gastric acid. They show extensive
	diversity intissue distribution and in their subcellular localization. Thecytosolic protein encoded
	by this gene is predominantly expressedin the salivary glands. Alternative splicing in the coding
	regionresults in multiple transcript variants encoding differentisoforms. [provided by RefSeq,
