	Cyclin dependent kinase inhibitor 2D, Cyclin-dependent kinase 4 inhibitor D, Cyclin-dependent	
	kinase inhibitor 2D p19, inhibits CDK4, inhibitor of cyclin-dependent kinase 4d, INK4D, p19, p19-	
	INK4D, p19INK4d, Similar to cyclin-dependent kinase inhibitor 2D, CDN2D_HUMAN.	
	Background: The protein encoded by this gene is a member of the INK4 family of cyclin-	
	dependent kinase inhibitors. This protein has been shown to form a stable complex with CDK4	
	or CDK6, and prevent the activation of the CDK kinases, thus function as a cell growth regulator	
	that controls cell cycle G1 progression. The abundance of the transcript of this gene was found	
	to oscillate in a cell-cycle dependent manner with the lowest expression at mid G1 and a	
	maximal expression during S phase. The negative regulation of the cell cycle involved in this	
	protein was shown to participate in repressing neuronal proliferation, as well as	
	spermatogenesis. Two alternatively spliced variants of this gene, which encode an identical	
	protein, have been reported. [provided by RefSeq, Jul 2008].
