Cgmp (cGMP Products)

Target Details

Target Type:	Chemical
Background:	Synonyms: Cyclic GMP, Cyclic guanosine monophosphate, Guanosine 3 5 Cyclic
	Monophosphate.
	Background: Cyclic guanosine monophosphate (cGMP) serves as a second messenger in a
	manner similar to that observed with cAMP. Peptide hormones, such as the natriuretic factors,
	activate receptors that are associated with membrane-bound guanylate cyclase (GC). Receptor
	activation of GC leads to the conversion of GTP to cGMP. Nitric oxide (NO) also stimulates
	cGMP production by activating soluble GC, perhaps by binding to the heme moiety of the
	enzyme. Similar to cAMP, cGMP mediates most of its intracellular effects through the
	activation of specific cGMP dependent protein kinases (PKG).
