|                     | Background: CHMP1B belongs to the chromatin-modifying protein/charged multivesicular body    |
|                     | protein (CHMP) family. These proteins are components of ESCRT-III (endosomal sorting         |
|                     | complex required for transport III), a complex involved in degradation of surface receptor   |
|                     | proteins and formation of endocytic multivesicular bodies (MVBs). Some CHMPs have both       |
|                     | nuclear and cytoplasmic/vesicular distributions, and one such CHMP, CHMP1A (MIM 164010),     |
|                     | is required for both MVB formation and regulation of cell cycle progression                  |
