	CLAP2_HUMAN.
	Background: CLASP2 is a microtubule plus end tracking protein that promotes the stabilization
	of dynamic microtubules and is required for the polarization of the cytoplasmic microtubule
	arrays in migrating cells towards the leading edge of the cell. CLASP2 may act at the cell cortex
	to enhance the frequency of rescue of depolymerizing microtubules by attaching their plus
	ends to cortical platforms composed of ERC1 and PHLDB2. This cortical microtubule
	stabilizing activity is regulated at least in part by phosphatidylinositol 3 kinase signaling.
	CLASP2 also performs a similar stabilizing function at the kinetochore which is essential for the
	bipolar alignment of chromosomes on the mitotic spindle.
Gene ID:	23122

Pathways:

Microtubule Dynamics, Maintenance of Protein Location
