Target Details

Alternative Name:	Cullin 3 (CUL3 Products)
Background:	Synonyms: CUL-3, PHA2E, Cullin-3, CUL3, KIAA0617
	Background: Core component of multiple cullin-RING-based BCR (BTB-CUL3-RBX1) E3
	ubiquitin-protein ligase complexes which mediate the ubiquitination and subsequent
	proteasomal degradation of target proteins. As a scaffold protein may contribute to catalysis
	through positioning of the substrate and the ubiquitin-conjugating enzyme. The E3 ubiquitin-
	protein ligase activity of the complex is dependent on the neddylation of the cullin subunit and
	is inhibited by the association of the deneddylated cullin subunit with TIP120A/CAND1 (By
	similarity). The functional specificity of the BCR complex depends on the BTB domain-
	containing protein as the substrate recognition component. BCR(KLHL42) is involved in
	ubiquitination of KATNA1. BCR(SPOP) is involved in ubiquitination of BMI1/PCGF4, BRMS1,
	H2AFY and DAXX, GLI2 and GLI3. Can also form a cullin-RING-based BCR (BTB-CUL3-RBX1) E
	ubiquitin-protein ligase complex containing homodimeric SPOPL or the heterodimer formed by
	SPOP and SPOPL, these complexes have lower ubiquitin ligase activity. BCR(KLHL9-KLHL13)
	controls the dynamic behavior of AURKB on mitotic chromosomes and thereby coordinates
	faithful mitotic progression and completion of cytokinesis. BCR(KLHL12) is involved in ER-Golg
	transport by regulating the size of COPII coats, thereby playing a key role in collagen export,
	which is required for embryonic stem (ES) cells division: BCR(KLHL12) acts by mediating
	monoubiquitination of SEC31 (SEC31A or SEC31B). BCR(KLHL3) acts as a regulator of ion
	transport in the distal nephron, by mediating ubiquitination of WNK4. The BCR(KLHL20) E3
	ubiquitin ligase complex is involved in interferon response and anterograde Golgi to endosome
	transport: it mediates both ubiquitination leading to degradation and 'Lys-33'-linked
	ubiquitination (PubMed:20389280, PubMed:21840486, PubMed:21670212, PubMed:24768539
