	embryonic stem cell related protein 1, Pluripotent embryonic stem cell-related gene 1,
	Pluripotent embryonic stem cell-related gene 1 protein .
	Background: SCRG1 (scrapie-responsive protein 1) is a 98 amino acid secreted protein that
	belongs to the SCRG1 family. The SCRG1 protein contains a 20-amino acid signal peptide, and
	is expressed abundantly in the central nervous system of human adult, but not at all in fetal
	brain. The protein is targeted to the Golgi apparatus and large dense-core vesicles/secretory
	granules in neurons. High levels of SCRG1 transcripts are also observed in testis and aorta.
	SCRG1 is associated with neurodegenerative changes observed in transmissible spongiform
	encephalopathies. It may play a role in host response to prion-associated infections. The
	SCRG1 protein may be partly included in the membrane or secreted by the cells due to its
	hydrophobic N-terminus. The human and mouse SCRG1 proteins share 83 % sequence identity
	The SCRG1 gene is conserved in chimpanzee, cow, mouse, rat and chicken, and maps to
	human chromosome 4q34.1.
