DUSP7 (DUSP7 Products)

Target Details

Background:	Synonyms: Dual specicity phosphatase 7, Dual specicity protein phosphatase 7, Dual specicity				
	protein phosphatase PYST2, DUS7_HUMAN, Dusp7, Jnk Stimulatory Phosphatase 1, JSP1, MKPX, PYST2.				
	Background: Dual-specificity phosphatases (DUSPs) constitute a large heterogeneous				
	subgroup of the type I cysteine-based protein-tyrosine phosphatase superfamily. DUSPs are characterized by their ability to dephosphorylate both tyrosine and serine/threonine residues. DUSP7 belongs to a class of DUSPs, designated MKPs, that dephosphorylate MAPK (mitogenactivated protein kinase) proteins ERK (see MIM 601795), JNK (see MIM 601158), and p38 (see MIM 600289) with specificity distinct from that of individual MKP proteins. MKPs contain a				
					highly conserved C-terminal catalytic domain and an N-terminal Cdc25 (see MIM 116947)-like
					(CH2) domain. MAPK activation cascades mediate various physiologic processes, including
					cellular proliferation, apoptosis, differentiation, and stress responses
