	Background: ERCC6L belongs to the SNF2 ATPase family and acts as an essential component
	of the spindle assembly checkpoint. It contributes to the mitotic checkpoint by recruiting MAD2
	to kinetochores and monitoring tension on centromeric chromatin. It acts as a tension sensor
	that associates with catenated DNA which is stretched under tension until it is resolved during
	anaphase. ERCC6L may also play a role in the teratogenic action of alcohol.
