	ethylmalonic encephalopathy 1, Ethylmalonic encephalopathy protein 1, hepatoma subtracted
	clone one, Hepatoma subtracted clone one protein, HSCO, Protein ETHE1, YF13H12.
	Background: Probably plays an important role in metabolic homeostasis in mitochondria. May
	function as a nuclear-cytoplasmic shuttling protein that binds transcription factor RELA/NFKB3
	in the nucleus and exports it to the cytoplasm. Suppresses p53-induced apoptosis by
	preventing nuclear localization of RELA.Involvement in disease:Defects in ETHE1 are a cause of
	ethylmalonic encephalopathy (EE) . EE is an autosomal recessive disorder characterized by
	neurodevelopmental delay and regression, recurrent petechiae, acrocyanosis, diarrhea, leading
	to death in the first decade of life. It is also associated with persistent lactic acidemia and
	ethylmalonic and methylsuccinic aciduria.
